TREATING PHYSICIAN'S PERMANENT AND STATIONARY REPORT/PR3

Dear Ladies and Gentlemen:

This patient has been under my care for treatment of his bilateral upper extremity repetitive strain injury.

HISTORY OF INJURY This patient is a 40-year-old right-hand-dominant EKG technician who was referred to my office with bilateral upper extremity pain. His symptoms arose in the setting of his work as an EKG technician. His job is a quota-based position that requires him to analyze large numbers of EKG reports on a computer monitor. This involves extensive mouse clicking in a repetitive fashion. In the course of his work, he developed a diffuse of bilateral hand and forearm pain.

TREATMENT RENDERED This has been managed conservatively with work restrictions and occupational hand therapy. In addition, he is undergone a formal ergonomics evaluation of his computer work station.

CURRENT STATUS Unchanged.

CURRENT SUBJECTIVE COMPLAINTS The patient continues to report vague bilateral hand and wrist and forearm pain. He has been off work for several weeks now but the symptoms are persistent. He reports that he was talking on the phone just a few days ago and had a significant exacerbation of his right wrist and forearm pain from simply holding a phone.

Patient Name Jonathan Shockley

Date of Visit 2019-05-28

Page 2 of 2

PHYSICAL EXAM Physical exam continues to be within normal limits. Tinel's sign in the ulnar nerve at the elbow is negative bilaterally. Forearm compartments are soft and nontender to palpation bilaterally. Finkelstein's test is negative at the wrist bilaterally. Wrist range of motion and digital range of motion are normal bilaterally. Carpal tunnel compression test is negative bilaterally. Sensation is grossly intact distally bilaterally.

IMPRESSION 40-year-old man with bilateral upper extremity repetitive strain injury. I had a lengthy discussion with the patient today regarding his current status. Unfortunately, I have no additional treatment to offer him. His symptoms are classic for repetitive strain injury and are clearly related to the nature of his work as a reviewer of EKGs. This job requires very high-volume and repetitive use of a mouse and keyboard. I told him that the prognosis for these sorts of repetitive pain symptoms is highly variable. My suspicion is that the symptoms will eventually resolve. The timeline is not clear. He is emphatic about being unable to use a computer as any minor use of the computer causes flares in his symptoms. I therefore recommended that we designate him Permanent and Stationary status with the permanent work restriction of no computer use. He understands that this will likely have implications for his employment.

TREATMENT/FUTURE MEDICAL None needed.

WORK STATUS Modified duty with no use of the computer.

FOLLOW UP None needed.

Thank you again for your referral. Please let me know if I can be of any further help.

Sincerely,

Patrick O Lang, M.D.

INITIAL EVALUATION

RE: Shockley, Jonathan

DOB: 09/27/1978

DOI: 02/15/19

EMPLOYER: Biotelemetry, Inc.

INSURANCE: Chubb

CL#: 040519008736

DATE OF SERVICE: 10/21/19

INTRODUCTION

I have evaluated Mr. Shockley in my Emeryville office on 10/21/19 in consultation. After reviewing his records I have accepted him as a patient. The patient has also selected me to be his primary treating physician.

HISTORY OF PRESENT ILLNESS

The patient is a 41-year-old right-handed man who was injured during the course of his usual and customary work. The patient has worked as an EKG technician and his requires him to perform repetitive activity using his hand. He has to click frequently. He started developing pain in his right hand and switched to the left. His left developed pain problems. He initially had pain around the wrist area. The pain has gradually traveled up the arm towards the neck. He also has occasional hand pain.

CURRENT COMPLAINTS

The pain is constant at low level, exacerbated by hand activity. The pain wakes him up at night. When he does not do anything, his hand does not hurt. The pain increases with activity, especially computer work, cellphone use, and writing. Inactivity, Advil, deep massage makes the pain better.

He denies any numbness and tingling.

ACTIVITIES OF DAILY LIVING

He is uncomfortable looking after himself performing self-care activities and is slow and careful in doing so. He can lift and carry heavy objects, but gets extra discomfort in doing so. He is able to walk the same distance as before his injury. He can do heavy activity for at least 2 minutes. He can climb 1 flight of stairs without difficulty. He can sit for 30 minutes to 1 hour without difficulty. He can sit for 2 hours without difficulty. He can stand or walk for 2 hours without difficulty. He has some difficulty reaching and grasping things at eye level. He

INITIAL EVALUATION

RE: Shockley, Jonathan

DATE OF SERVICE: 10/21/19

Page 2 of 9

has some difficulty reaching and grasping things overhead. He has some difficulty with pushing or pulling activities. He has a lot of difficulty gripping, grasping, holding and manipulating objects using his hands. He has a lot of difficulty with repetitive motions such as typing on a computer. He has a lot of difficulty with forceful activities using his hands. He can kneel, bend or squat without difficulty. His sleep is moderately disturbed 2 to 3 hours nightly since his injury. His sexual activity is a little less frequent because of his injury. At this moment, his pain is moderate. His pain is moderate most of the time. His pain interferes with his ability to travel and engage in social activities some of the time. His pain interferes with his ability to engage in recreational activities most of the time. His pain interferes with his ability to concentrate and think some of the time. He has moderate depression or anxiety from his injury and discomfort most of the time.

REVIEW OF SYMPTOMS

Patient states they are currently experiencing:

Pain in neck
Anxiety

Patient states they are not currently experiencing:

Chills
Fever
Night sweats
Severe fatigue
Dizziness
Headaches
Wears Contacts
Wears glasses
Blurry vision
Double vision
Lumps in neck
Difficulty breathing
Cough
Coughing up blood
Wheezing
Difficulty breathing lying flat
Fainting
Abnormal heartbeat
Chest pain
Constipation
Heartburn
Nausea

Abdominal pain
Black tarry stools
Throwing up blood
Urinary incontinence
Blood in urine
Difficulty urinating
Painful urination
Itching of skin
Rash
Yellowing of skin
Balance problems
Poor concentration
Memory loss
Numbness
Seizures
Tremors
Weakness
Excessive bleeding
Blood clots
Depression
Hallucinations
Suicidal thoughts

PAST MEDICAL HISTORY

1. Bronchitis 2 years ago.
2. Eczema.
3. He had an episode of epilepsy and took Tegretol at age 10 or 11.

INITIAL EVALUATION
RE: Shockley, Jonathan
DATE OF SERVICE: 10/21/19
Page 3 of 9

4. History of anxiety. He was taking Hydroxyzine but now does not take medication and just meditates.

PAST SURGICAL HISTORY

1. Adenoidectomy in 1987.
2. Lasik surgery in 2000.
3. Sympathectomy in 2000.
4. Right big toe bone spur removal in 2000.
5. Right Achilles tendon debridement in 2002.
6. Right Achilles tendon debridement in 2003.

FAMILY HISTORY

Patient does not have a family history of drug addiction.

Patient has a family history of chronic pain.

PSYCH/SOCIAL HISTORY

The patient does not smoke cigarettes.

The patient does not drink alcoholic beverages.

The patient does not use illicit drugs.

The patient is not married.

The patient has a significant other.

The patient has no children.

Patient does not have a family history of childhood abuse.

Patient does not have a family history of sexual abuse.

Epworth Scale is 0. The patient goes to bed, falls asleep and wakes up at variable times. The patient feels he gets adequate rest.

PSYCHOLOGICAL TESTING

The patient was administered psychological testing (PHQ-SADS). This test is a screening test for anxiety, depression and the impact of somatic symptoms. The purpose of the test is to screen patients for psychological aspect of chronic pain to help the clinician incorporate additional

INITIAL EVALUATION
RE: Shockley, Jonathan
DATE OF SERVICE: 10/21/19
Page 4 of 9

adjunctive treatment. Provision of adjunctive psychotherapy can have a significant impact on efficacy of medical treatment.

SOMATIC (PHQ-15)

The patient has a somatic (PHQ-15) score of 5, which indicates he is mildly bothered by somatic issues.

ANXIETY (GAD-7)

The patient's anxiety (GAD-7) score is 5, which indicates he is experiencing mild anxiety.

PANIC ATTACKS

He does not experience panic attacks.

DEPRESSION (PHQ-9)

The patient's depression (PHQ-9) score is 1, which indicates he is experiencing minimal depression.

FUNCTIONAL DIFFICULTIES

The patient's functional difficulties are 4, which indicate his functions are extremely difficult.

The purpose of the psychological testing is to determine if there are any psychological factors that will affect the patient's progress with medical treatment. The testing is also used to determine whether the patient needs a formal psychological evaluation or any psychological treatment as an adjunct to the medical treatment.

Based on my clinical assessment of the patient and the psychological testing, I believe that this patient would be a candidate for an initial evaluation at a CARF-certified functional restoration program once the patient has exhausted medical and surgical treatment.

OCCUPATIONAL HISTORY

The patient was working for Biotelemetry, Inc. at the time of the injury.
 He is not currently working.

The patient last worked on 02/15/19.

He had worked at Biotelemetry, Inc. for 8 months prior to injury.

He had worked for the following companies prior to this injury:

1. SF Ballet
2. Tulsa Ballet
3. Boston Ballet
4. Biotelemetry, Inc./Lifewatch

His job duties at the time of injury were processing and editing EKGs from cardiac devices, answering calls regarding same

He does have prior work injuries:

1. 1997 left ankle sprain, different employer, resolved
2. 1998, all toes, different employer, resolved
3. 2000, right big toe bone spur, different employer, resolved
4. 2001 right chronic Achilles tendinitis, different employer, settled

He does not have prior motor vehicle accidents.

He does not have prior non-motor vehicle accidents.

Motor examination of the elbows:

Motor examination of the elbows	Right	Left
Flexion	NL	NL
Extension	NL	NL

Grip: Grip strength was normal and symmetrical.

SPECIAL TESTING

I have conducted a urine tox screen, which was negative for any illicit drugs or any prescribed scheduled drugs. I am not planning to prescribe him any controlled substances and further confirmation of this test is not indicated.

DIAGNOSIS

1. Cumulative trauma injury to both upper extremities.

DISCUSSION

This gentleman has had cumulative trauma injury to both upper extremities. The pain initially started in the right wrist. The pain gradually started traveling up the arm up to the level of the shoulder. The left hand became painful around the same area/wrist. This was as a compensation for the right. The pain on the left also radiates up to the shoulder.

Upon examination, he had normal range of motion in all the joints of his upper extremities. There was no evidence of a neurological deficit. I believe this gentleman does have cumulative trauma injury, which is brought on by activity. He has not worked now for a while and his symptoms are better during the examination.

I recommend 12 sessions of acupuncture and 12 sessions of soft tissue mobilization/massage therapy.

If he does not respond to conservative measures, an evaluation at a CARF-certified functional restoration program would be indicated.

I will see him back in 4 weeks in follow up.

Work Restrictions:

Repetitive activities using upper extremities limited to 1 hour in an 8-hour shift. No lifting, pushing, or pulling greater than 5 pounds

WORK STATUS

The patient is not permanent and stationary.

VISIT TYPE:

PRIMARY TREATING PHYSICIAN'S PROGRESS REPORT:

Mr. Shockley came to our office today for a follow-up visit.

SUBJECTIVE COMPLAINTS:

Patient is here to follow up on pain in his bilateral hands.

He continues to report bilateral hand pain, right greater than left. Occasionally pain radiates up his arms towards his neck. Pain is worse with repetitive use of his upper extremities, excessive

typing or computer work. Pain is better with conservative treatment.

He reports having a pain flair with the use of massage therapy, this dramatically increased his pain.

He also has been going to acupuncture treatment. This does help with his pain.

With regard to medication, he does take Advil as needed for pain.

ROS:

Constitutional:

Patient denies chills, fever, night sweats, or severe fatigue.

Head:

Patient denies dizziness or headaches.

Eyes:

Patient denies wearing corrective lenses, blurry vision, or double vision.

Neck:

Patient complains of pain but denies lumps in his neck.

Respiratory:

Patient denies difficulty breathing, cough, coughing up blood, or wheezing.

Cardiovascular:

Patient denies difficulty breathing while lying flat, fainting, abnormal heartbeat, or chest pain.

Gastrointestinal:

Patient denies constipation, heartburn, nausea, abdominal pain, black tarry stools, or throwing up blood.

Genitourinary:

Patient denies urinary incontinence, blood in urine, difficulty urinating, or painful urination.

Skin:

Patient denies itching of skin, rash, or yellowing of skin.

Neurologic:

Patient denies balance problems, poor concentration, memory loss, numbness, seizures, tremors, or weakness.

Hematologic:

Patient denies excessive bleeding or blood clots.

Psychiatric:

Patient complains of anxiety but denies depression, hallucinations and suicidal thoughts.

I have reviewed the review of systems with the patient and it is accurate as listed.

OBJECTIVE FINDINGS:

Constitutional - General Appearance:

Patient is near ideal body weight and is well groomed.

Orientation:

Patient is alert and oriented x3.

Mood and Affect:

Patient does not exhibit acute distress, anxiety, confusion, fatigue, lethargy, pain, tearfulness, or suicidal ideation.

Gait and Station:

No abnormalities observed.

Musculoskeletal - Strength:

RUE:

Arm Abduction 5/5

Forearm Flexion 5/5

Forearm Extension 5/5

Wrist Extension 5/5

Thumb Apposition 5/5

Digit Abduction 5/5.

LUE:

Forearm Extension 5/5

Wrist Extension 5/5

Thumb Apposition 5/5

Digit Abduction 5/5.

Skin:

No rashes, lesions, café-au-lait spots, or ulcers observed on right upper extremity.

No rashes, lesions, café-au-lait spots, or ulcers observed on left upper extremity.

No rashes, lesions, café-au-lait spots, or ulcers observed on right lower extremity.

No rashes, lesions, café-au-lait spots, or ulcers observed on left lower extremity.

Current Medications:

1. Advil (OTC)

2. Aspirin Ec 81 Mg Tablet (OTC)

FORMAL REQUEST FOR AUTHORIZATION:

6 sessions of acupuncture 97813, 97814, 97026, 97124 Hand Bilateral Hands.

DIAGNOSIS:

Z79.899 Other long term (current) drug therapy

PRESCRIPTION:

I Voltaren 1% Gel SIG: Apply to affected area daily QTY: 1.00.

TREATMENT PLAN:

Assessment:

during the course of his usual and customary work. The patient has worked as an EKG technician and his requires him to perform repetitive activity using his hand. He has to click frequently. He started developing pain in his right hand and switched to the left.

Plan:

- He will continue with acupuncture treatment, he has approximately 7 appointments remaining. Before acupuncture treatment his pain is a 4-6/10, this will decrease down to approximately 2-3/10, this allows him to use his hands more. We will request for 6 additional sessions so he can continue this.
- Ok to discontinue massage therapy, TENS dramatically increased his pain.
- If he does not respond to conservative measures, an evaluation at the Northern California functional restoration program would be indicated.
- Voltaren gel prescribed today.
- He is scheduled for QME on Jan 23, 2020.

Follow up in 4 weeks.

WORK STATUS:

WORK STATUS: The patient is not permanent and stationary.

Work restrictions: Repetitive activities using upper extremities limited to 1 hour in an 8-hour shift. No lifting, pushing, or pulling greater than 5 pounds

TIME SPENT:

"I declare under penalty and perjury that information contained in this report and its attachments, if any, is true and correct to the best of my knowledge and beliefs, except as to information I have indicated that I received from others. As to that information, I declare under penalty of perjury that the information accurately describes the information provided to me, and except as noted herein, that I believe it to be true.

I further declare that I have not violated labor code section 139.3, and have not offered, delivered, received or accepted any rebate, refund, commission, references, patronage dividend of accounts or other consideration, whether in the form of money or otherwise, or compensation or inducement for any referred evaluation or examination."

Please consider the treatment plan as a formal request for preauthorization services described therein. In the event that the written denial, authorization or notice of delay is not received by our office within 7 business days with a description of the review by a qualified physician with training in pain management and/or physical medicine and rehabilitation expertise (as per the dictates of the California Code of Regulation 9792.6) we will assume de facto authorization.

If prior pre-authorization has been requested in an earlier report or therapeutic plan, please consider the date of the prior request as applicable for the purposes of the formal date of request.

*Dr. Morley and Dr. Jamasbi hold a financial interest in Bay Surgery Center. The Northern California Functional Restoration Program is an integral part of Pain and Rehabilitative Consultants Medical Group.

PATIENT: SHOCKLEY, JONATHAN
DATE OF ONSET: 2/15/19
DOB: 9/27/1978
CLAIM#: 040519008736
DATE OF VISIT: 11/5/2019

SUBJECTIVE COMPLAINTS

COMPLAINT 1: Right & left wrist-, forearm-, and elbow-pain. Pain is constant, of sharp, aching quality, up to a 9-10 (0-10) depending on the day and activity level. There is associated numbness and paresthesia in the hand and wrist. Pain and associated symptoms are aggravated by work.

Elbow-ROM:

- Flexion: nl
- Extension: nl
- Supination: nl
- Pronation: nl

ASSESSMENT

- Wrist-, Hand-, and Elbow Pain
- Lateral Epicondylitis
- Myofascial Pain Syndrome

Prognosis: The patient is in significant discomfort limiting his ability to work and impeding on his quality of life. It seems that there is acute, severe muscle tightness/shortness causing his musculoskeletal pain and associated symptoms. The care he is receiving is reasonable and necessary.

Diagnosis:

- Lateral Epicondylitis

CURRENT PLAN

Recommended Treatments: Electro-Acupuncture, Myofascial Release, Heat/Cold Therapy.
Treatment twice weekly for two weeks followed by re-eval.

PROCEDURES:

HAND SURGERY CONSULTATION

Dear Ladies and Gentlemen:

I saw this patient today for evaluation of his bilateral hand, wrist, and forearm pain. Thank you for the referral.

HISTORY OF INJURY This patient is a 40-year-old right-hand-dominant electrocardiogram technician who reports a several month history of worsening bilateral hand, wrist, and forearm pain. He reports that his job requires very intense and prolonged use of a computer and mouse. The symptoms arose in the setting of at work. He does not recall any other specific history of trauma.

CURRENT SUBJECTIVE COMPLAINTS The patient reports vague and diffuse bilateral hand, wrist, and forearm pain.

PREVIOUS WORK/INJURY HISTORY The patient reports a prior Achilles tendon injury.

PAST MEDICAL HISTORY Patient denies any significant past medical history. Surgical history includes removal of a bone spur from the foot and two prior Achilles tendon operations. Medications include aspirin and Advil as needed. He has no known drug allergies.

SOCIAL HISTORY The patient works as an electrocardiogram technician but does extensive data analysis on a computer. He previously worked as a ballet dancer. He does not smoke. He does not drink alcohol.

Patient Name Shockley, Jonathan

Date of Visit 2019-03-01

Page 2 of 2

PHYSICAL EXAM Vital signs SPO2 100%, blood pressure 116/59, heart rate 61, respiratory 12, temperature 96.7.

Examination of the bilateral upper extremities reveals no deformity. Tinel's sign in the ulnar nerve at the elbow is negative bilaterally. Forearm compartments are soft and nontender to palpation bilaterally. Finkelstein's test is negative bilaterally. Watson's test is negative bilaterally. Wrist and digital range of motion are normal bilaterally. There is no A1 pulley tenderness or triggering throughout either hand. Sensation is grossly intact distally bilaterally.

IMPRESSION 40-year-old man with bilateral upper extremity repetitive strain injury.

TREATMENT RECOMMENDATIONS I had a lengthy discussion with the patient regarding his diagnosis of repetitive strain injury. The symptoms are undoubtedly related to his work on a computer. I recommended he begin working with an occupational hand therapist on a repetitive strain protocol. I also talked with him about optimizing his computer workstation ergonomics and using dictation software as much as possible. All questions are answered. I can see him back in 6-8 weeks to reassess his symptoms.

Thank you again for the referral. Please let me know if I can be of any further help.

Sincerely,

Patrick O Lang, M.D.

TREATING PHYSICIAN'S PROGRESS REPORT/PR2

Dear Ladies and Gentlemen:

HISTORY OF INJURY This patient has been under my care for treatment of his bilateral upper extremity repetitive strain injury. His current occupation requires intensive sustained use of a computer and mouse. This has generated a vague bilateral upper extremity pain that has been refractory to conservative management.

PRESENT STATUS Improved.

CURRENT SUBJECTIVE COMPLAINTS The patient continues to report pain in multiple locations in the bilateral hands, wrists, and forearms. These symptoms continue to wax and wane relative to his computer use.

PHYSICAL EXAM Physical exam is entirely within normal limits. Tinel's sign in the ulnar nerve at the elbow and the median nerve at the wrist is negative bilaterally. Forearm compartments are soft and nontender bilaterally. Wrist and digital range of motion is normal, and sensation is intact distally bilaterally.

IMPRESSION/DIAGNOSIS Bilateral upper extremity repetitive strain injury.

TREATMENT RECOMMENDATIONS This patient has a clear case of repetitive strain injury affecting his bilateral upper extremities. He has made some adjustments to his ergonomic workstation and has seen some mild improvement in his symptoms. He continues to report that his pain is exacerbated by a computer use. We will maintain his work restrictions from computer use for the next six weeks. He will also continue working with his occupational hand therapist. I can see him back in six weeks for follow-up.

Received by SOLVER on 2019-04-30 10:21:13 Central Time

Claim#: 040519008736

Dear Mr. Castro:

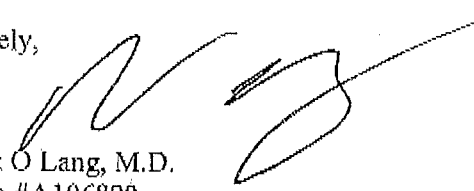

I am writing regarding in response to your correspondence dated May 1, 2019.

Jonathan Shockley has been under my care for treatment of his bilateral upper extremity repetitive strain injury. His symptoms are directly related to his work as a cardiology data analyst. He spends long hours on a computer every day in the course of his normal work. He was put on temporary total disability on his initial visit March 1, 2019 until April 10, 2019. I have agreed to place him on modified duty with the restriction of no computer use until his symptoms improve from April 10, 2019 through June 1, 2019. This is not an open ended work restriction, and we will reevaluate his status when I see him back in the office in a few weeks. My hope is that he will be able to return to work with no restrictions following the next visit, as I have no additional treatment to offer him. He is continuing to work with his occupational hand therapist in the meantime.

In summary, this patient will remain on modified duty with the restriction of no computer use until the first week of June, 2019. At that point, I anticipate that he will be Permanent and Stationary status with no residual work restrictions.

Please contact my office with any additional questions.

Sincerely,

Patrick O Lang, M.D.

Daily Note / Billing Sheet

Patient Name: Shockley, Jonathan
Date of Birth: 09/27/1978
Referring Physician(s): Lang, Patrick MD

Date of Daily Note: 03/18/2019
Injury/Onset/Change of Status Date: 02/15/2019
Diagnosis: ICD10: M79.641: Pain in right hand, M79.642:
Pain in left hand
Visit No.: 1
Insurance Name: One Call PT/ Align Networks

Date of Original Eval: 03/18/2019
Treatment Diagnosis: ICD10: M79.641: Pain in right hand,
M79.642: Pain in left hand

Subjective

Treatment Side: Left, Right
Pain Location: Bilateral hands
Pain Scale: Worst: 3 Best: 1 Current: 1
Home Health Care: No
Mental Status/Cognitive Function Appears Impaired? No

Objective

Objective Findings

Eval completed.
MHP/Paraffin to bilateral hands, MHP to bilateral FA, Intro'd to HEP consisting of FA stretches/CBs/intro to proper positioning and ergo/ducks and penguins

Assessment

Assessment/Diagnosis: Pt presents with pain and decreased function that affects ability to complete I/ADLs.

Patient Education: Intro'd workstation set up/ergonomics, contrast baths, FA stretches, ducks penguins, CBs

Rehab Potential: Good

Patient Problems:

- Decreased function and increased pain affecting ability to complete I/ADLs.

Short Term Goals:

1: (2 Weeks) | 1. Pt will be I with HEP |

Long Term Goals:

1: (6 Weeks) | 1. Pt will decrease pain to 0-1/10

2. Pt will understand and implement proper positioning for I/ADLs.

3. Pt will increase grip strength bilaterally by 10#

4. Pt will be able to return to work part time while implementing proper positioning/breaks. |

Occupational Therapy Initial Examination

Patient Name: Shockley, Jonathan
Date of Birth: 09/27/1978
Referring Physician(s): Lang, Patrick MD

Visit No.: 1

Date of Initial Examination: 03/18/2019
Injury/Onset/Change of Status Date: 02/15/2019
Diagnosis: ICD10: M79.641: Pain in right hand, M79.642: Pain in left hand
Treatment Diagnosis: ICD10: M79.641: Pain in right hand, M79.642: Pain in left hand

Subjective

Treatment Side: Left, Right

History of Present Condition/Mechanism of Injury: Pt is a RHD Male who uses a mouse for work primarily analyzing EKG; Pt reports over time it got worse on both hands. Pt stopped working 1 month ago because he realized if he kept going, it would get worse. Pt uses a mouse mostly for work.

Pt reports he is not currently very optimistic about going back to work, and will likely return part-time rather than full time. Pt reports most of his coworkers had a bad set up and also had bad posture.

Pain Location: Bilateral hands

Pain Scale: Worst: 3 Best: 1 Current: 1

Home Health Care: No

Medical History Review: The patient's occupational profile and medical and therapy history includes a brief history with review of medical and/or therapy records related to the presenting problem.

Objective

Objective Findings

MHP/Paraffin to bilateral hands, MHP to bilateral FA on foam roller, backstrokes and snow angels 1x20, STM/cupping to bilateral FA flexors/extensors, green flexbar sup 1x10 red flexbar pro 1x10, 2# wrist curls 2x10 each plane, red gripper 1x10 with FA in neutral, continue discussion of increase work breaks throughout the day with decreased computer use. C/P

Assessment

Assessment/Diagnosis: Pt with low activity tolerance for progressive strengthening ex's. Pt with great progress with stretches but reported continue to have constant diffused pain at B FA and with decreased activity tolerance for functional activities. Pt may benefit from continuing skilled therapy for 1x/wk for 6 wks to inc strength and activity tolerance for work demands and functional ADLs/IADLs.

Rehab Potential: Good

Patient Problems:

- Decreased function and increased pain affecting ability to complete I/ADLs.
- Decreased function and increased pain affecting ability to complete I/ADLs.

Short Term Goals:

- 1: (2 Weeks) | 1. Pt will be I with HEP |
- 2: (2 Weeks) | 1. Pt will be I with HEP |

Long Term Goals:

- 1: (6 Weeks) | 1. Pt will decrease pain to 0-1/10
2. Pt will understand and implement proper positioning for I/ADLs.
3. Pt will increase grip strength bilaterally by 10#
4. Pt will be able to return to work part time while implementing proper positioning/breaks. |
- 2: (6 Weeks) | 1. Pt will decrease pain to 0-1/10
2. Pt will understand and implement proper positioning for I/ADLs.
3. Pt will increase grip strength bilaterally by 10#
4. Pt will be able to return to work part time while implementing proper positioning/breaks. |

Treatment Diagnosis: ICD10: M79.641: Pain in right hand,
M79.642: Pain in left hand

Subjective

Treatment Side: Left, Right

Current Complaints / Gains: "I tested it this past week and had a flare up especially in my R side after using my phone for half an hour. I have no idea what I am going to do job-wise, maybe I will become homeless. This is very depressing."

Home Health Care: No

Mental Status/Cognitive Function Appears Impaired? No

Objective

Objective Findings

Paraffin to bilateral hands, MHP to bilateral FA, STM to bilateral FA flexors/extensors with cupping, green flexbar sup/pro 2x10, 5# hand gripper 10x each side, C/P post tx

Post-Treatment

Grip
L 63#
R 72#

Assessment

Assessment/Diagnosis: Pt presents w/ compromised circulation which may be affecting healing process for pt. Noted that after 30 seconds to 1 min of cupping, pt's skin immediately blanched. Typical clinical observation with other patients have shown that skin stays red for the next ~5 minutes at minimum post-cupping

Although pt's grip measurement on R side has gone up since initial visit, pt continues to have poor activity tolerance for progressive strengthening ex's and require multiple rest break to complete ex's. Continues to have bilateral FA pain w/ functional use

Rehab Potential: Good

Patient Problems:

- Decreased function and increased pain affecting ability to complete I/ADLs.

Short Term Goals:

1: (2 Weeks) | 1. Pt will be I with HEP |

Long Term Goals:

- 1: (6 Weeks) | 1. Pt will decrease pain to 0-1/10
2. Pt will understand and implement proper positioning for I/ADLs.
3. Pt will increase grip strength bilaterally by 10#
4. Pt will be able to return to work part time while implementing proper positioning/breaks. |
